

Conveying System Diagnostic Guide

Is your conveying system working for you? Whether your system is clearly malfunctioning, doesn't perform as well as it used to, or even "seems okay," lack of quality and efficiency may negatively—and seriously—impact your bottom line. Your priority is moving your product, and nothing should stand in the way.

DIAGNOSTIC CHECKLIST

Does your conveying system need maintenance, repair, or replacement? Pay attention to any of the following red flags:

- ❗ Constant belt tracking issues
- ❗ Excessive downtime due to fixing worn or locked idlers
- ❗ Faster than normal belt wear issues
- ❗ Belt requires too much tension for the conveyor to operate
- ❗ Excessive material buildup around hopper and chute areas
- ❗ Belt wiper leaves too much material on the belt
